/dore="Organ: Head; Vector: pYx-Asc; Site 1: EcoR I;
/clone="Organ: Head; Vector: pYx-Asc; Site 1: EcoR I;
Site 2: Not I; The library was constructed according
Bonafo, Lennon and Soares, Genome Research, 6:791-886,
1996. Denatured RNA was size fractionated on a 1% agarose
gel.First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYx-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CGAACTGAAT. This library was created for the University
lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH)."

This invention relates to a novel method for examining allergic diseases that comprises comparing the expression levels of a gene encoding the NOR -1 receptor protein between patients and healthy individuals. Specifically, the NOR-1 gene, also referred to as MINOR, is expressed in the specialist white blood cells known as eosinophils and is involved in mediating an allergic reaction. The present invention describes a differential display method that can identify the expression level of this gene in order to identify its usefulness in diagnosing allergic diseases such as atopic dermatitie. Furthermore, compositions can also be used to screen compounds for the treatment of allergic diseases. Accordingly, they exhibit various activities including antiallergic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Examining allergic diseases e.g. atopic dermatitis by differential display based on gene expression of NOR-1 receptor protein, also applicable in screening compounds for treatment of allergic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    human; receptor; allergic disease; NOR-1; MINOR; eosinophil; atopic dermatitis; antiallergic; antiinflammatory; dermatological.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human NOR-1 (MINOR) protein sequence SeqID 2.

The invention discloses a composition comprising two or more isolated rat or human polymuclectides or a polymuclectide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymuclectide, a host cell comprising the vector identifying a nuclectide sequence which is differentially regulated in an animal subjected to pain and a comprising the vector of the polymuclectide sequence that increases or decreases the expression of the polymuclectide sequence that is differentially expressed in neuronal tissue of a first animal companing an earload for identifying a compound which regulates the expression of a polymuclectide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the cativity in an animal of one or more of the polympetides or their antibodies. The polymoclectide or the compound that composition a method for identifying a compound useful in treating conditions are activity is useful for preparing a medicament for treating conditions are civity is useful for preparing a medicament for treating conditions. The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: the specification but was obtained in electronic form directly from WIPO at envisor in the contract of the printed or the compound of the contract of the printed or the compound that contract of the printed or the sequence date for this patent did not form part of the printed or the specification which is differentially expressed during pain.
                                                                                                                                                                                                                                                                                                                              New composition comprising two or more isolated polypeptides, useful preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ftp.wipo.int/pub/published_pct_sequences.

Nor-1 has been identified as a molecular target for therapeutic intervention in the treatment of myeloid leukaemia. The invention provides methods of inhibiting the proliferation of a haematopoietic stem cell or a haematopoietic myeloid cell by modularing the level of a nor-1 and/or nur77 nuclear receptor. This involves increasing the level of the receptor polypeptide or polynucleotide, e.g. by administration of a vector comprising the polynucleotide. A claimed method of treating leukaemia comprises modulating a nor-1 and/or nur77 nuclear receptor in a haematopoietic stem cell or myeloid cell. Also claimed are methods of

```
This invention relates to a novel method of determining whether a patient chas an increased risk for developing a disease or disorder which comprises determining the presence of a mutation or polymorphism in the patient. See John or polymorphism in the patient or level of biological activity of a nuclear receptor expression or level of biological activity of a nuclear receptor polypeptide in the patient or in a cell of the patient. The invention may compared with an antibacterial, antithyroid, cardiovascular-Gen, groopends with an antibacterial, antithyroid, cardiovascular-Gen, groopends with an antibacterial, or insorders-Gen, gastrointestinal-Gen, gracelological, hepatotropic, or pisorders-Gen, gastrointestinal-Gen, gracelological, hepatotropic, or increased risk for developing a disease or disorder. The nucleic acid concerning a disease or disorder. The nucleic acid concerning a disease or disorder, or a compound that increased risk for developing a disease or disorder, or a compound that conding a nuclear receptor polypeptide, an expression vector comprising the nucleic acid operably linked to a promoter, or a compound that candiovascular, intestine, kidney, liver, lung, muscular, gland, colon, cardiovascular, intestine, kidney, liver, lung, muscular, cuterus, panceres, skin, spleen, stomach, testes, thymus, chycoid, or nutritive disease or disorder. The present sequence is that of a nuclear receptor protein which may be used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

The invention relates to a novel isolated polypeptide (NOVX) comprising a mature form of any of the 37 amino acid sequences fully defined in the predictication. A polypeptide of the invention has antidabetic, anorectic, cardiant, hypotensive, antiarterisoclerotic, anorectic, cardiant, hypotensive, antidarterisoclerotic, anorectic, cardiant, hypotensive, antidarterisoclerotic, anorectic, cardiant, hypotensive, anticonvulsant, osteopathic, neuroprotective, antiparkinatory, dermatological, antiasthmatic, and cardiant the manufacture of a medicament for tracting a syndrome associated with a human disease, preferably a NOVX-associated disorder. The mortler acid molecules, polypeptides and antibodies are useful for treating preventing or disgnosing diseases such as metabolic disorders. The nucleic acid molecules, polypeptides and antibodies are useful for treating preventing or disgnosing diseases such as metabolic disorders, clabetes, obesity, infectious diseases (viral, bacterial, fungal, classes, pellepsy, immune disorders, althemer's disease. Parkinson's disease, epilepsy, immune disorders, althemer's classes. Parkinson's disease, epilepsy, immune disorders, althemer's disease. Parkinson's disease, epilepsy, immune disorders, althemer's classes. Parkinson's disease, epilepsy, immune disorders, astham, and various dyslipidesmias. The mucleic acids and polypeptides construction of small molecules cather and various dyslipidesmias. The mucleic acids and polypeptides construction of antibodies that bind immunospecifically to NoVX substances for use in therapeutic or disanseis, cell differation, benatopolesis, wound healing and angiogenesis, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The NoVA shows homology to complement factor I precursor; NOV3 shows homology to citanomy precursor; NOV3 shows homology to citanomy processor; NOV3 shows homology to Livy processor; NO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The protein has high homology to the rat NOR-1 receptor. The protein contains several DNA binding domains including P, and A boxes which also have high homology to the rat NOR-1 DNA binding

The present invention relates to a new method of treating an organism for an inflammatory immune disease. The method of the invention comprises reducing expression of a NURR subfamily nucleic acid sequence or corticotropin releasing hormone (RH) receptor nucleic acid sequence, inhibiting transcriptional activity of a NURR superfamily member/CRH ceeptor amino acid sequence, or reducing the level of NURR superfamily member/CRH receptor amino acid sequence, or reducing the level of NURR superfamily corganism for an inflammatory immune diseases such as chronic inflammatory joint disease, preferably arthritis, selected from rheumatory corganism for an inflammatory immune diseases such as chronic inflammatory interferes with interaction of a NURR subfamily polypeptide with a cincerferes with interaction of a NURR subfamily polypeptide with a cincerferes with interaction of a NURR subfamily polypeptide and the common response. The agonist of the invention is useful for inhibiting transcriptional activity of nuclear receptor polypeptide and the corresponsit is useful for decreasing the expression of a NURR subfamily antagonist is useful for decreasing the expression of a NURR subfamily creceptor NORI protein of the invention. This sequence is an antagonist of the invention. This sequence is an antagonist of the invention. Dut was obtained from Genbank (7441771)
                                                                                                                                                                                                                                                Treating inflammatory immune disease such as arthritis, comprises suppressing expression level of NURR subfamily of nuclear transcription factors, or corticotropin releasing hormone receptor.
                                                                                                                                          (BAYU ) BAYLOR COLLEGE MEDICINE

The nucleic acid and protein can be used to diagnose brain neuronal diseases, e.g. Alzheimer's disease, Parkinson's disease. Further, the genetic diseases can be treated using the receptor as it inhibits expression of a gene by binding to it

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of human nor-1 nuclear receptor polypeptide intervention in the treatment of myeloid leukaemia. The invention provides methods of inhibiting the proliferation of a haematopoietic stem provides methods of inhibiting the proliferation of a haematopoietic stem cell or a haematopoietic myeloid cell by modulating the level of a nor-1 and/or nur77 nuclear receptor. This involves increasing the level of the receptor polypeptide or polymucleotide, e.g. by administration of a vector comprising the polymucleotide, e.g. by administration of a haematopoietic stem coult in and/or nur77 nuclear receptor in a haematopoietic stem cell or myeloid cell. Also claimed methods of treating identifying an upregulator of expression of nor-1 and/or nur77, of identifying a compound for the treatment of leukaemia, and of screening for a compound for the treatment of leukaemia, and a mouse model for leukaemia comprising a mouse having defective nor-1 and nur77 nucleic

Nor-1 has been identified as a molecular target for therapeutic changes. Nor-1 has been identified as a molecular target for therapeutic intervention in the treatment of myeloid leukaemia. The invention composition of a haematopoietic myeloid cell by modulating the level of a nor-1 and/or nur77 nuclear receptor. This involves increasing the level of the receptor polypeptide or polynucleotide, e.g. by administration of a vector comprising the polynucleotide. A claimed method of treating leukaemia comprises modulating a nor-1 and/or nur77 nuclear receptor in a leukaemia comprises modulating cell. Also claimed are methods of identifying a compound for the treatment of leukaemia, and of screening for a compound for the treatment of leukaemia, and of screening for a compound for treatment of leukaemia, and a mouse model for a compound for treatment of leukaemia, and a mouse model for a compound for treatment of leukaemia, and a mouse model for a compound for treatment of nor-1 and nur77 nucleic э ; RALTDSTPRDLDYSRYCPTDQAAAGTDAEHVQQFYNLLTASIDVSRSWAEKIPGFTDLPK 463 RALTDSTPRDLDYSRYCPADQAAAGTDAEHVQQFYNLLTASIDVSRSWAEKIPGFTDLPK 480 EDQTLLIESAFLELFVLRLSIRSNTAEDKFVFCNGLVLHRLQCLRGFGEWLDSIKDFSLN 523 524 LOSLNLDIQALACLSALSMITERHGLKEPKRVBELCNKITSSLKDHQSKGQALEPTESKV 583 FVEGYSSNYELKPSCVYOMO----RPLIKVEEGRAPSYHHHHHHHHHHHHHHHQQ----- 110 120 168 180 226 283 300 343 403 9 9 Inhibiting proliferation of a hematopoietic cell, useful for treating or preventing leukemia, comprises modulating the level or activity of nor-1 and/or nur77 nuclear receptor. The present invention relates to PRO proteins and their coding sequences.

The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polyaeccharide antigen unresponsiveness, selective IgA deficiency, selective IgA deficiency, selective IgA deficiency, beneficiency, burkit's configuration, transient hypogammaglobulinemia of infancy, Burkit's urknemediate lymphoma, follicular lymphoma, tutermediate lymphoma, follicular lymphoma, type II charmediate lymphoma, follicular lymphoma, type II charmediate lymphoma, tollicular lymphoma, type II charmediate lymphoma, tollicular lymphoma, type II charmediate lymphoma, projement of arthitis, autoimmune mediated haemolytic anaemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or ankylosing spondylitis. The PRO protein are also useful for preparing a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and come mapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development can are screening of therapeutically useful reagents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New PRO polypeptide, useful for diagnosing and treating a B cell related disorder, e.g. Burkitt's lymphoma, rheumatoid arthritis, autoimmune mediated hemolytic anemia, myasthenia gravis or ankylosing spondylitis.
Immunosuppressive; Cytostatic; Antiarthritic; Antirheumatic; Antianemic; Antiallergic; Muscular; Neuroprotective; Nephrotropic; Antiinflammatory; Gene Therapy; PRO; B cell related disorder; cancer; immune-mediated inflammatory disease; human.

This invention relates to the novel association of protein sequences (and the genes which encode them) to the NP-kappaB pathway. The invention may the genes which encode them) to the NP-kappaB pathway. The invention may cytostatic, hepatotropic, virucide, antiarteriosclerotic, antiarteriosclerotic, cytostatic, hepatotropic, virucide, antiarteriosclerotic, antiarteriosclerotic, immunomodulator, cerebroprotective, vasotropic, immunosuppressive or cyulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions conditions are useful for diagnosing, preventing, treating, or ameliorating conditions in immune disorder, an inflammatory disorder, an inflammatory disorder.

Condition aberrant NP-kappaB required, cancer, aberrant apportosis, related to aberrant NP-kappaB required, cancer, aberrant apportosis, condermal dysplasia, immunodeficiency, viral infections, HIV-1, HTLV-1, expodermal dysplasia, immunodeficiency, viral infections, HIV-1, HTLV-1, condermal dysplasia, immunodeficiency, viral infection, host cells our vival, evasion of immune responses, rheumatoid arthritis, inflammatory condermined is activity, disorders related to aberrant actue phase responses, hypercongenital conditions, birth defects, necrotic lesions, wounds, organ transplant rejection, conditions related to oberrant signal transplant conditions, birth defects, necrotic lesions, wounds, organ transplant rejection, conditions related to operant acute phase responses, hypercongenital conditions, birth defects, necrotic lesions, wounds, organ transplant rejection, conditions related to operant acute phase, collise acuted to aberrant signal transduction, which other viruses. The present sequence is that of a human protein which the viruses. The present sequence is that of a human protein which invention. Note: This sequence does not appear in the specification with the NP-kappaB pathway of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 159
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 279
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                            New isolated polynuclectides and polypeptides associated with NF-kappaB pathway, useful for diagnosing, treating, or preventing disorders or diseases associated with NF-kappaB pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 HHHHHHHQQQQQQQDSIPPASSPEDEVLPSTSNYFKQSPPSTPTTPAFPPQAGALWDEA

The gene was isolated from 16 day old rat embryo cerebral neurons, induced into apoptosis, by amplifying the sequence from cDNA using primers AAT28371-4. Antisense nucleic acids and ribozymes targeted to the gene can be used as agents for treating cerebral nerve

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        597
                                       Novel targeting construct for producing transgenic mouse useful as disease model and for identifying modulators of gene expression, has sequences homologous to neural orphan receptor 1 and a selectable marker.
                                                                                                                                                                                                                                                                                                                                                                                                                                          IPPASSPEDEVLPSTSMYFKQSPPSTPTTPAFPPQAGALWDBALPSAPGCIAPGPLLDPP 176
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AALESHPYGLPLAKRAAPLAFPPLGLTPSPTASSLLGESPSLPSPPSRSSSSGEGTCAVC 295
                                                                                                                    The present sequence is a protein sequence for murine Neural Orphan Receptor 1 (NOR1, also known as Translocated in Extraskeletal Chondrosarcoma (TEC), is involved in the control of cell proliferation and apoptosis and is expressed mainly in the central nervous system. The NOR1 coding sequence was used to generate a targeting construct (I). (I) is useful for producing a transgenic mouse comprising a disruption in a NOR1 gene and exhibiting increased or enhanced pain response threshold, or impaired balance and impaired motor coordination
                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                         9

cutariary of a maintain of the movel polymucleotide, a host cell comprising the vector comprising the movel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence (C which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence (C that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polymucleotide sequence which is differentially a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the regulates the compound or small molecule that regulates the cativity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating compound that expensions or their antibodies. The polypeptides given in the specification, and a pharmaceutical composition comprising the one or more coplypeptides or their antibodies. The polypeptide or the compound that modulates its activity is useful for preparing a medicament for treating coplypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating copin, (CI) and spared nerve injury (SNI) in an animal (e.g. sphan contribution) which is differentially expressed during patent of new propersor of the printed copin who was obtained in electronic form directly from WIPO at the wipo.int/pub/published_pot_sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 FVEGYSSNYELKPSCVYQM----QRPLIKVEEGRAPSYHHHHHHHHHHHHQQQHQQPS 116

The present sequence is that of rat nor-1 nuclear receptor polypeptide CC JC2493. Nor-1 has been identified as a molecular target for therapeutic intervention in the treatment of myeloid leukaemia. The invention provides methods of inhibiting the proliferation of a haematopoietic stem cell or a haematopoietic myeloid cell by modulating the level of a nor-1 and/or nur7 nuclear receptor. This involves increasing the level of the receptor polypeptide or polynucleotide. A claimed method of treating corporations modulating a nor-1 and/or nur77 nuclear receptor in a leukaemia comprises modulating a nor-1 and/or nur77 nuclear receptor in a cleaning to myeloid cell. Also claimed are methods of claimed are methods of identifying a compound for the treatment of leukaemia, and of screening identifying a compound for the treatment of leukaemia, and of screening cleukaemia comprising a mouse having defective nor-1 and nur77 nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     417

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3
